

CSC Portal Reports & Documents Manual

Plain-English + Technical README for CSC Portal v1.6.0 Beta

Build timestamp: 21 May 2026 @ 22:19:05Z

This manual explains the CSC private portal reports and document-vault workflow. It is written for setup, testing, and future GitHub/Apps Script maintenance.

Plain-English Overview

CSC Portal v1.6.0 Beta connects the private portal, the existing CSC Website Google Sheet, and the Google Drive document vault. The portal can now sync manually uploaded Drive files into the Documents tab, classify them, attempt statement parsing, and generate 15th-to-15th monthly investor reports.

- No new Google Sheet tabs are added.
- The portal remains private and login-required.
- Reports are management reports, not audited financial statements.
- Statement extraction is conservative and defaults to needs_review when uncertain.
- cookservicescompany@gmail.com is the correct contact and email reply-to address.

Technical Architecture

The system uses GitHub Pages for the static /portal page, Google Apps Script as the backend API, Google Sheets as the structured database, and Google Drive as the secure document vault.

- Frontend: /portal/index.html
- Backend: CSC_PORTAL_BACKEND_v1.6.0_Beta.gs
- Manifest: appsscript.json with Drive API v2 Advanced Service
- Drive folder: Config key DRIVE_DOCUMENTS_FOLDER_ID
- Market grid data: Tiingo cached into MarketPrices/MarketHistory
- Visual ticker/chart: TradingView widgets only

Google Sheet Tabs Used

The build uses the locked existing workbook structure only.

```
Config
PortalUsers
Sessions
Accounts
Positions
Transactions
MarketWatchlist
MarketPrices
```

MarketHistory
Statements
Documents
ESignRequests
ESignEvents
Reports
ReportRecipients
EmailLog
BusinessUpdates
Approvals
CapitalContributions
MemberLedger
Budget
Logs

Drive Vault Setup

The Drive vault stores uploaded PDFs and documents. The portal displays files only after they are logged in the Documents tab. Files uploaded manually to Drive must be synced into the sheet.

- Keep the Drive folder restricted/private.
- The Apps Script owner must have access to the folder.
- Use Sync Drive Vault to import manually uploaded files.
- Synced files are marked status = synced_from_drive and uploaded_by = drive_sync.

appscript.json Manifest Setup

Use Drive API v2 only. Do not enable both Drive API v2 and v3 with the same Drive userSymbol.

```
{
  "timeZone": "America/New_York",
  "exceptionLogging": "STACKDRIVER",
  "runtimeVersion": "v8",
  "oauthScopes": [
    "https://www.googleapis.com/auth/spreadsheets",
    "https://www.googleapis.com/auth/drive",

    "https://www.googleapis.com/auth/script.send_mail",
    "https://www.googleapis.com/auth/script.scriptapp"
  ],
  "dependencies": {
    "enabledAdvancedServices": [
      {
        "userSymbol": "Drive",
        "serviceId": "drive",
        "version": "v2"
      }
    ]
  }
}
```

Document Sync Workflow

The syncDriveVaultDocuments action scans the Drive folder and writes missing file records into the existing Documents tab.

- Checks existing rows by drive_file_id.
- Creates Documents rows for missing files.
- Auto-classifies file type from filename and MIME type where possible.
- Creates Statements rows for bank, Fidelity, brokerage, and report PDFs.
- Logs sync details in Logs.raw_payload_json.

Document Classification Rules

Admins can classify/update document metadata from the portal using existing Documents headers only.

- Editable fields: title, category, document_type, status, related_account_id, related_report_id, notes.
- Statement types: bank_statement, fidelity_statement, brokerage_statement, report_pdf.
- Statuses: uploaded, synced_from_drive, classified, parsed, needs_review, approved, archived.

Fidelity/Bank Statement Reading Rules

Statement parsing attempts Drive/Google Docs OCR/text extraction when Drive API is available. The output is summary-level only and must be reviewed before use in final reports.

- Summary goes to Statements.parsed_summary.
- Status goes to Statements.parsed_status.
- Debug/extraction detail goes to Logs.raw_payload_json.
- Low-confidence, scanned, unreadable, or unvalidated PDFs remain needs_review.
- The system must never invent balances, dates, positions, cost basis, transactions, or totals.

15th-to-15th Report Period Logic

Reports use a 15th-to-15th period instead of a calendar month.

```
Example:  
Report generated on 15 June 2026  
Period Start: 15 May 2026  
Period End: 15 June 2026  
  
Title:  
Cook Services Company Monthly Investor Report - 15 May 2026 to 15 June 2026
```

Monthly Report Approval Rules

Generated reports default to pending_review. Final investor emails only send for approved or approved_with_exceptions reports.

- If any statement is needs_review, the report remains pending_review.

- If the report is pending_review, final investor email should not send.
- All sends are logged in EmailLog.
- Branded emails use the CSC Investments logo, portal button, footer, and cookservicescompany@gmail.com reply-to.

Portal Testing Checklist

Use this checklist after deployment.

- Paste CSC_PORTAL_BACKEND_v1.6.0_Beta.gs into Apps Script.
- Replace /portal/index.html in the GitHub repo.
- Paste appsscript.json and enable Drive API v2 service.
- Redeploy the web app as Execute as Me / Anyone.
- Run CSC_manualSyncDriveVaultDocuments().
- Confirm manually uploaded Drive files appear in Documents.
- Classify a document in the portal.
- Parse a statement and confirm parsed_status updates.
- Generate a report and confirm 15th-to-15th dates.
- Approve a report and test Send Approved Report.

Troubleshooting

Common fixes.

- Drive files not appearing: click Sync Drive Vault, then refresh Documents.
- Drive permission error: verify Drive folder sharing and appsscript.json scopes.
- Advanced Drive error: enable Drive API v2 in Apps Script Services.
- Report stuck pending_review: classify/parse statements or approve with exceptions.
- Wrong email: search the backend for about@cgnews.net; v1.6.0 should use cookservicescompany@gmail.com.
